MAPPING OUR COMBINED SUCCESS

From the first brainstorming session, as we discussed the ramifications of consolidating our operations across a territory from Calvin to Lakota, one look at the map revealed perfect geographic synergies. Our rail systems align. Our ability to load shuttle trains align. Filling 110-car trains at five locations—three on the BNSF line and two shuttles on the CP (as serviced by the NPR)—gives us impressive marketplace muscle.

By Mark Greicar
General Manager

Draw a circle 30 miles wide around each location with shuttle train capabilities and it's obvious they all overlap. Any customer's truck is now within 30 miles of a major grain delivery point!

Another reason this new business unit really clicks is the way our commodities match up. Because our combined producer-owners grow wheat, corn, soybeans, barley and canola, our

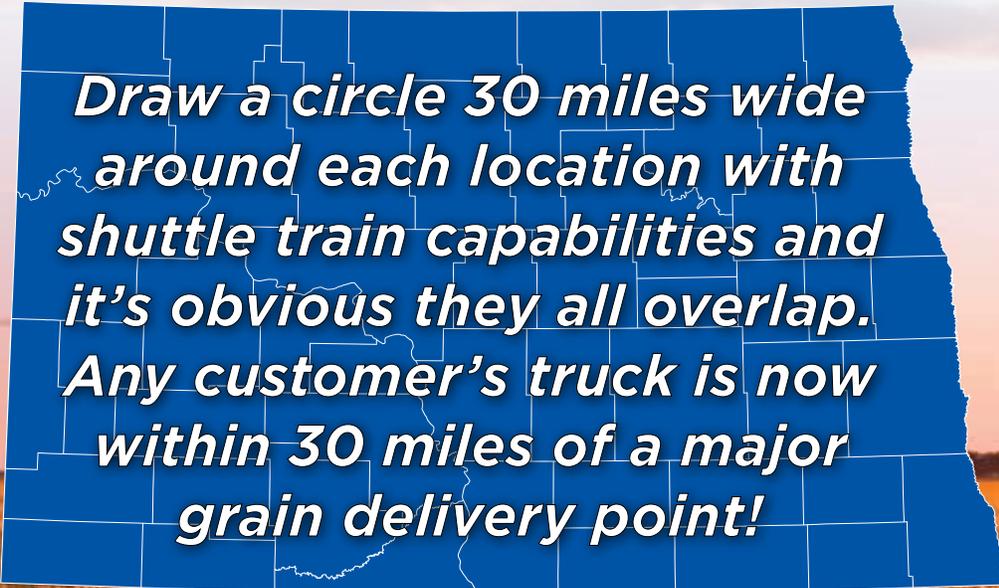

freight goals intersect. So do our needs for specific seed and agronomy inputs. Farmers who grow pinto beans from Devils Lake, Park River, Pisek and Lankin are all linked to Central Valley Bean. We're doing the same things now, but as one unit and on a bigger scale.

Combined grain volume will allow us to better manage our freight positions

as Kevin Stein explains on page 11. We can leverage our scheduled trains to create storage space where we need it most, on any given day. Let's say Kevin ordered a train to arrive in Lakota the second week of October, but realizes Milton will need it more. He can change the train destination so harvest deliveries in Milton keep rolling. Having this flexibility is another advantage to the consolidation.

The road to increased buying power

While you might not personally witness freight advantages of our consolidation, I'm certain you'll be aware of agronomy outcomes. Our combined unit now includes

Draw a circle 30 miles wide around each location with shuttle train capabilities and it's obvious they all overlap. Any customer's truck is now within 30 miles of a major grain delivery point!

two mega fertilizer plants on the BNSF, one in Lakota and one in Milton. On page 8, Travis Peterson explains what our increased buying power means in terms of better relationships with our suppliers.

Our two units came to this consolidation with agronomy equipment resources we now share. That will be a cost savings and an efficiency gain. We were quick to realize the same piece of equipment could work its magic in fields around Devils Lake a week or two before it was needed in say, Langdon or Sarles. By taking advantage of our slight geographic spread, we'll get more from our rolling-stock investment.

We're sharing human resources as well. Our combined team now includes a controller (Luke Wavra), a credit manager (Rick Follman) and a safety director (Junell Jonasson). In addition, other key employees from both of our previous units are growing into bigger roles—something that benefits them and our customers.

Our energy division bridges time and distance

The biggest new advantage for patrons in the south will be a relationship with our energy division headquartered in Adams. We will soon introduce all customers to Cenex automated fuel delivery (AFD), which bridges time and distance for energy deliveries. Steve Stabo explains the

program on page 20.

For those of you who don't know me, I'd say I'm a real people manager. I want my leadership team members to take charge of their responsibilities, knowing I have confidence in them to to steer this consolidation in the right direction.

On Feb. 9, I'll have been with CHS for 29 years. I started as a general laborer and worked up to location manager and merchandising roles. First, I was responsible for one employee, then five, then 37 and then 46 employees as a general manager. Today, I'm invested in mapping our combined success with the help of 141 employees.

DEDICATION ADDS UP IN YOUR FAVOR!

- ✓ **Four years ago.** Jeremy Safranski came to work in Devils Lake in 2012. In all, he's accumulated 13 years with CHS, the majority in northwestern Minnesota.
- ✓ **41 long-time employees.** Jeremy's not alone in his dedication to working for the producer-owners of this cooperative. Forty-one employees in our newly consolidated operations can point to 13 years or better serving you.
- ✓ **Talk about professional loyalty!** Steve Sunderland in Milton has 27 years with CHS and Bruce Cahill in Calvin started 26 years ago. Scott Sauvageau in Devils Lake and Rod O'Brien in Calvin have been on the job 25 years each. Maybe one of them will eventually surpass Ron Borgen at 37 years of service!
- ✓ **1,133 years of experience.** By totaling years of CHS service represented by our employee roster, we counted 1,133 years on the job. That's a millennium's worth of specific knowledge leveraged for your success!

MEET THE FINANCIAL GUARDIANS OF OUR

OUR NEW CREDIT MANAGER COMES FULL CIRCLE

“After working in town for 30 years, I’m back in ag!” It’s easy to tell Rick Follman, our new credit manager, is excited about his job. Since taking early retirement last year from Western Equipment Finance in Devils Lake, where he spent the past 13 years as a vice president, Rick’s had time to work for local farmers, including his son-in-law. Rick says, “In the eyes of farmers looking for fieldwork help, I very quickly became one of the most popular guys in town.”

Rick Follman
Credit Manager

Still, he couldn’t resist a new challenge with CHS. “When Devils Lake and Milton were set to consolidate, Mark Greicar asked for my help streamlining responsibilities for all accounts receivables and credit offerings. Once we mapped out how the credit manager job would function, I decided to take it and started Oct. 3.”

Immediately, Rick got busy on the phone. “I’ve been calling CHS customers to introduce myself and discuss the financial implications of their crop year. We talk about the new combined co-op and how each customer wants to plan financially. I haven’t run into anybody who doesn’t like to talk my arm off. Maybe that’s because I also like to talk.”

Though Rick spent recent years financing commercial enterprises and worked 12 ½ years for the state of North Dakota, he’s already back in the rhythm of the agricultural financial year. “I grew up on a farm near Wolford, North Dakota. One thing I haven’t forgotten about farming is that financial events happen only as fast as the crop grows.”

One goal of consolidating credit activities within our business unit is freeing up our agronomy field reps. “Right away, Jeremy Safranski and the team of agronomists gave me an introduction to CHS Capital financing programs already in use around here. Going forward, I’ll be the central point of contact for Autumn Rewards seed financing, agronomy lines of credit and full operating loans. Local CHS agronomy representatives will point you to me, so together we can complete your application.

“I don’t approve or deny credit. I’m more like the financing person at an implement dealership who gathers info then sends it on to the credit people at the corporate office. Since applications come in all states of completion, having one person fill in all the blanks will

streamline the process.”

His experience tells Rick some of the best financing offerings are directly related to CHS. “Autumn Rewards (for seed) and 0% agronomy financing are two of the best programs anywhere. What farmers might not realize is the 0% program will never charge interest retroactively on your balance if you don’t achieve the Jan. 15 due date. That’s not true of all credit choices and we don’t always know how well other financial companies are treating our customers.”

The value of a local financial controller

When our two units consolidated, customers in the north gained a controller. It’s possible you’re wondering what that means to you.

Luke Wavra says, “From your standpoint, having a full-time controller should signify localized attention to detail. Previously a regional controller completed month-end reports for CHS Milton and six other CHS co-ops, making sure all the journal entries were recorded properly. But there’s a lot going on here daily and managers can benefit from additional updates. As a combined unit we now have so many activities to keep track of, including energy and feed.”

Luke’s responsible for all the accounting functions of the whole group. “I assemble monthly financial reviews for Mark Greicar, our general manager. Together we run through the reports with the board of directors to assure your representatives always have a clear understanding of our progress.”

It’s also Luke’s job to constantly apply internal control tests required by CHS. “One test would be assuring when we receive a product, the packing slip is signed by an employee. Only when we’re sure the quantity and price match

NEW GALAXY

Luke Wavra
Controller

our order do we sign off on the order.

“Another internal control function is our daily review of grain tickets to account for numerical gaps, generally caused by a voided ticket. In all we have 15 similar internal control tests performed quarterly, daily and monthly.” So, you can see that’s a big part of what Luke does.

“Every day I compile reports—any reports our managers request so they can check current activity in their divisions. It’s also up to me to build budgets for forecasting revenue and expenditure trends. Additionally, I keep

track of our inventory and develop our balance sheets and income statements.

“Accomplishing those steps across more locations will be a learning process, but one I truly look forward to. This is what I love to do. After graduating from Mayville State University, I took an internship as a bookkeeper for a small manufacturing company then moved to Illinois to gain more accounting experience. When Laura and I had a child, we knew we wanted to get back to our families in North Dakota. I’ve been with CHS the past 14 years.”

Your connection to your cooperative works for you in many ways, not the least of which is your patronage check. Travis Schmidt (left), agronomy sales, presents Bert Elgin of Lakota his patronage check, to the right is Darrel Klundt, Lakota station manager.

WHAT HASN'T CHANGED ... AND WHAT'S EVEN BETTER

In the agronomy division, we intend to do our jobs so effectively you won't notice any difference because of our recent consolidation. We'll keep doing everything we did before, but with enhanced resources.

By [Travis Peterson](#)
Assistant General
Manager and
Agronomy Manager

Take the increased fertilizer capacity between our combined warehouses as an example. Our CHS business unit can now accumulate almost 95% of a year's needs for our customers.

I'm already finding it more cost-effective to buy fertilizer in larger blocks than smaller blocks. As Mark Greicar says, "It's easier to take a position!" Previously, we would at times need to order about a train and a half to supplement our needs.

Unfortunately, we do not have the ability to do it that way. You either order one or two. With our consolidation, we have the ability to order two without exposing our company to unnecessary risk. My new role centers on fertilizer pricing and logistics. I'm concentrating on lining up freight and managing our capacity as well as purchasing agronomy rolling stock. To accomplish those objectives, I work directly

with location managers and operations managers to make sure they have the people and equipment they need when they need it.

For instance, we'll plan for the application equipment needed throughout our system. Devils Lake and Lakota typically start each season a week to 10 days earlier than in the north. We will be able to send equipment to the south when they're busiest and then move north. Our combined resources should give us the opportunity to deliver a bigger application fleet to the right places at the right times. In time, we expect to trim costs, thanks to effective use of our equipment resources.

Jeremy Safranski is in charge of our inventories of crop protection and seed while managing our team of agronomists. I'm very confident in his abilities. You might not know how closely the two of us were already working together before the consolidation. That goes for the entire Devils Lake agronomy staff and the Milton agronomy staff. These are all good people.

Our combined resources should give us the opportunity to send a bigger application fleet to the right places at the right times.

We have capacity for 75,000 fertilizer tons, with annual sales at about 85,000 tons.

We'll fill nine dry fertilizer facilities: two 18,000-ton buildings, one 26,000-ton plant, one 6,000-ton plant and five smaller plants.

Seven to eight fertilizer trains per year will deliver our supply.

Then our expanded fleet of 21 fertilizer spreaders, four sprayers and upward of 40 tender units will deliver product to your fields.

THERE'S A SIMPLER WAY TO PROTECT YOUR SPRING WHEAT FIELDS.

Don't go to absurd lengths to kill weeds and grasses in your spring wheat and durum fields. For the broadest protection available — controlling 86 broadleaves and 13 grasses — use PerfectMatch™ herbicide, the successor to WideMatch® herbicide. Offering multiple modes of action for resistance management, it does everything you want, all in one product. How perfect is that?

USE FUTURES ORDERS TO FOLLOW YOUR INSTINCTS

By Tony Gratton
Grain Procurement
Manager

Wheat went mostly into bins, and as a result, I think we will soon see more movement in other crops. By choosing that strategy, I believe you made the correct move—especially when you consider the carries in the market and the possibility for basis improvement later in the year.

On Wednesday, Oct. 12, USDA raised the already record-breaking soybean harvest number. Soybean futures jumped because the trade had been thinking the harvest would be even bigger. The government also trimmed its corn production estimate while still assuming the crop would set a record.

Wheat posted a bearish trading pattern based on the October report, even though the production tally was lowered and because of the remaining total stock. Canola and soybeans were major movers in early autumn.

Rain delays this fall allowed us to receive grain without overtaxing our storage. When you couldn't harvest, trains were still able to come in and trucks could move. As a result, harvest kept progressing.

With the wet summer and fall, we saw some quality issues—specifically vomitoxin in wheat and barley. In some cases, wheat falling numbers are less than desirable. In light of those issues, be sure to keep in touch with your crop insurance agent to get full value from the premium you paid. If you have concerns about quality of your stored grain,

remember to ask us to probe your bins. That way, you'll know what you're selling.

Keep looking for opportunities to market and hop on them. Listen to your gut and follow your instincts by placing futures orders. Your advantage in doing that is the way futures orders fill overnight. If you're just watching markets during the day, you might get the

sense your order won't fill, but it could fill at midnight.

Don't be leery of placing orders. You have ultimate control, and it's easy to adjust to a different level if anything changes. Discuss your orders through CHS Hedging with any of our grain merchandisers.

All of us in the grain division look forward to the new CHS adventure we're starting together. I can't wait to get to work with more customers now that we are all one unit. Throughout my career, I've come to appreciate all the people working for our customers—from truck drivers to agronomists. They're the people who make the CHS system work every day, knowing we're all one team.

In June 1997, I came to CHS in Milton where I was employed equally in agronomy and grain. From 1998 through 2002, I ran our first sprayer. Then I became grain operations manager at CHS Milton after it became a shuttle loader, and stayed in that position until 2006. At the time of our recent consolidation, I'd served 10 years as grain department manager. Going forward, I'm happy to be working closely with Kevin Stein, grain freight and logistics manager, who's based in Devils Lake.

Follow your instincts by placing futures orders. Your advantage in doing that is the way futures orders fill overnight.

WE'RE SWIMMING IN A BIGGER POOL

For those of you who haven't worked with me, I've been with CHS for 15 years. Before that, I spent four years with the Canadian Pacific as a marketing rep. I grew up on a grain farm near McVille, North Dakota. My role in the old business unit was all encompassing in grain—purchasing and marketing plus creating our freight deck.

By Kevin Stein
Grain Freight and
Logistics Manager

As my job redevelops, I'll be focusing on rail logistics for our full range of locations. It will be more efficient if one person controls the transportation of our larger freight pool from the many places where our customers deliver.

I'm working closely with location managers and with Tony Gratton, grain procurement manager. Tony and I will both continue to be points of contact for farmers marketing grain.

It's an important goal of our consolidation that you won't see any change in your local contacts for grain marketing.

We're fortunate to be merchandising with a bigger grain pool. Let me give you a sense of our improved scope. We've gained flexibility and market clout because we load out at three 110-car locations on the BNSF. Take soybean harvest as an example. Typically, it will start in the south and move north. With ownership of a big pool grain, we earn the ability to direct trains to

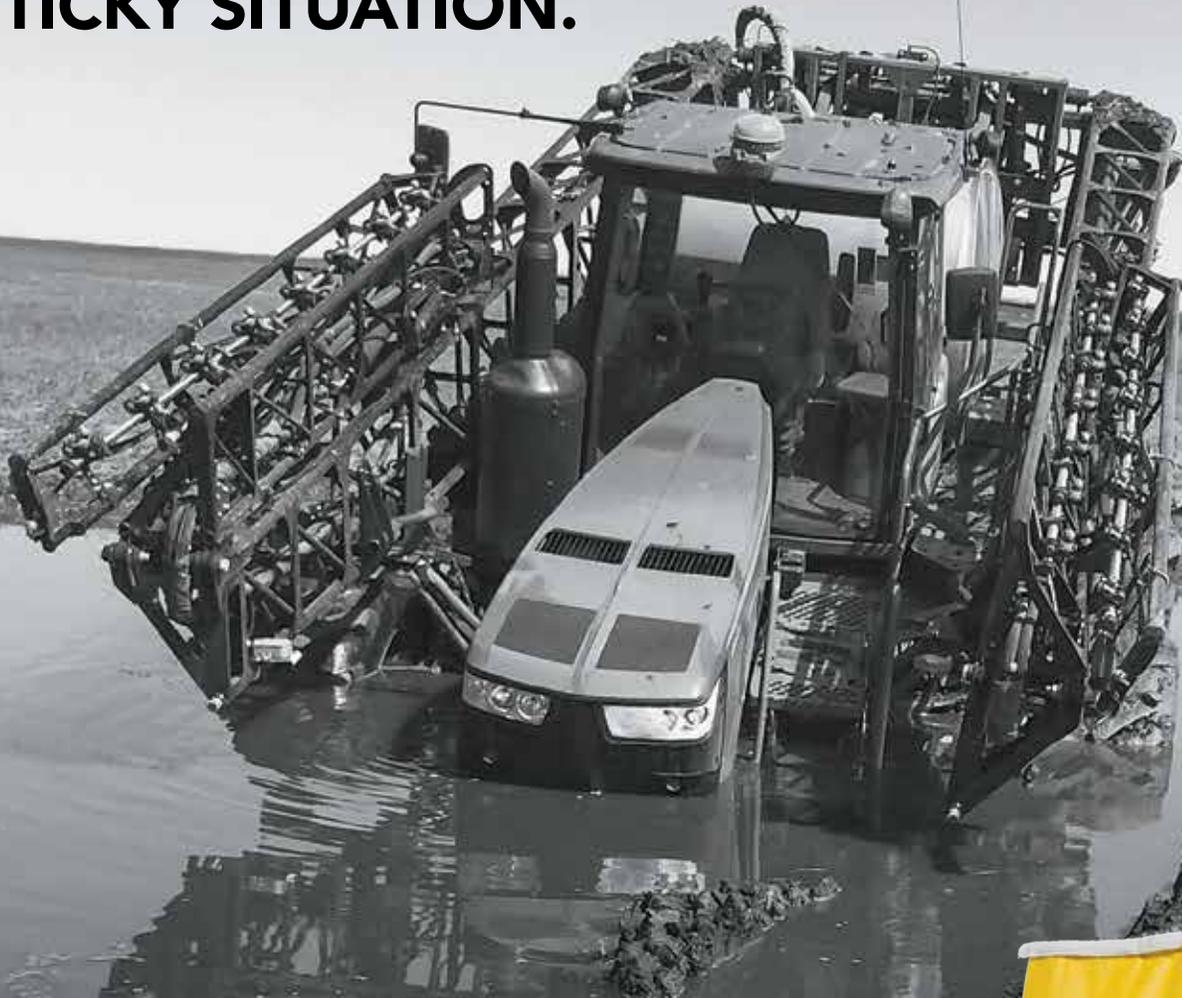

wherever we see the most harvest pressure.

We realize producers in different locations choose to empty their bins at different times. Wheat may move to town in Calvin before Lakota, for instance. Aware of our new ability to fill more trains, we can buy freight not knowing where we'll need it to go, ready to shift to where it will fit.

Here's another benefit of managing a bigger pool: We'll always be in price discovery mode—sometimes improving our price based on the number of bushels we're offering. Beyond that, a bigger freight pool allows us to mitigate weather risk. This fall, we had several trains ordered for October when weather events delayed harvest. Despite delays, we had enough freight to fill those sales by trucking in from locations where farmers were able to combine. Now we won't lose opportunities or assume a penalty for missing a contract.

DESPITE WEATHER DELAYS THIS FALL, WE HAD GRAIN ENOUGH TO FILL THOSE SALES BY TRUCKING IN FROM LOCATIONS WHERE FARMERS WERE ABLE TO COMBINE. AS A BIGGER UNIT, WE WON'T LOSE OPPORTUNITIES OR ASSUME A PENALTY FOR MISSING A CONTRACT.

WE CAN'T HELP YOU GET OUT OF EVERY STICKY SITUATION.

But we did develop one of the highest yielding Genuity® Roundup Ready® canolas.

We create chemistry

YOU'RE GOING TO HAVE MORE CHOICES

Unification will give us more combined crop protection business. The resulting larger orders will help us meet more of the mandatory volume programs chemical companies offer. And you'll have more choices for your farm.

By Jeremy Safranski
Agronomy Sales
Manager

That's going to be true in seed, especially. If there's a variety you weren't able to get before, I hope we'll be able to stock it for you now. In addition, CHS recently launched Allegiant seed, our own brand.

Allegiant will bring you a lineup of the world's most advanced technology and genetics. And when you're buying from Allegiant, you're buying from CHS—giving you ownership in the seed company. CHS started the first new seed company in the United States in many years to bring more value to our patrons. One of the primary benefits will be varieties specific to our northern geography. We aggregated those choices into our own seed booklet. Be sure to

ask for yours.

We will have Allegiant seed in supply for 2017, with more to come in 2018. As you work with your local agronomist, you'll still be able to request your favorite DeKalb® and Asgrow® varieties, too. In fact, we will offer you choices from 10 different seed companies we represent.

You're probably aware the crop protection industry is changing. In 2016, Dow and DuPont merged. Next, we got the news that ChemChina was buying the Swiss company Syngenta, and Bayer would be acquiring Monsanto. We don't look for additional changes ... at least not until the end of fiscal 2017. As far as our relationships with the major manufacturers, it has been

business as usual.

We're again offering a zero-percent interest chemical program to help you with your cash flow. You can make your order and defer payment until November 2017 on all chemistry. All it takes is a simple one-page application you can complete with our new credit manager, Rick Follman. Ask your agronomy representative to put you in touch with him. CHS is also your resource for Autumn Rewards seed financing (using another one-page application), which offers you the best possible early buying discounts without actually tying up cash.

It was an interesting year to say the least—a battle that started early and carried through harvest. We appreciate your loyalty through it all.

CHS drivers reviewing daily inspection procedures.

TRUSTED. PROVEN. FROM US.

Minnesota farmers who grew the first fields of seed for a CHS brand name sat down together. One of them said, “We believe we owe allegiance to the company we own.” And that’s how the first new seed company licensed in the United States acquired its name.

Yes, CHS has been selling seed for 80-some years. But for the first time as a farmer-owner, you have the opportunity to profit from seed sales in the same way you benefit from your fertilizer and chemical buys. First, you’ll earn patronage on your seed purchases. Second, income from seed sales will be reinvested by your own company.

The Allegiant choices you’ll notice in our 2017 seed guide all carry well-researched Monsanto® traits customized for local geography. Seed offerings from Allegiant are geared to prime corn and soybean areas: the Dakotas, Nebraska, Minnesota, Wisconsin and Illinois. CHS listened to what farmers in each

region said they needed.

We’re very proud of our lineup. In the guide, you’ll be able to see the origin of those proven traits. You will find Roundup Ready 2 Xtend® and Liberty Link® genetics...and more.

Seed is one of the most loyal purchases a farmer makes. Knowing seed performance is at the heart of your farm’s success, we believe our seed choices will solidify your already strong connection to your cooperative. That’s what the farmers featured on billboards along I-29 believe. They actually grew this year’s Allegiant seed. As Ryan Verlinde of Tracy, Minnesota, says, “It may have the CHS logo, but it’s also got my name on it.”

RYAN VERLINDE
VERLINDE FARMS

SEED

FOR FARMERS. BY FARMERS. 

**NOW YOU HAVE
MORE YIELDPOINT®
SPECIALISTS ON
YOUR SIDE**

MAKE THE MOST OF THEIR RESOURCES

Where will you plant your new Allegiant® seed varieties? How will you harness the increased efficiencies of our combined application service team?

It's planning time again. The best plans grow from exceptional data, the kind of in-depth background you get from YieldPoint.

They'll apply these resources to your decision making process:

- Data management services that link your records to next year's plan.
- Grid sampling and zone sampling.
- Planting and fertilizer prescriptions.
- Crop tissue sampling.
- Planter maps.
- Variable-rate application.
- Irrigation and drainage strategies.

You'll gain a bumper crop of information:

- Pooled data to benchmark your tactics and profitability.
- In-depth reports for tracking farms, fields and tasks.
- Seed selection advice specific to our region.
- Prescriptions keyed to local data.
- Customized advice at every stage.

And you work with CHS people you know!

OUR DEDICATION TO SAFETY WOULD FILL 24 BOOKS!

Look for local NH₃ training this winter. We want to help your employees and family understand and use important safety precautions.

By Junell Jonasson
Safety Director

The value of your ownership in your cooperative ultimately hinges on everyday safety—yours and ours. That's why every CHS manager emphasizes safe procedures, and it's why we have a safety director. Any potentially dangerous action or any emergency for which we aren't prepared presents a risk we aren't willing to accept.

Since our consolidation took effect, I've been working to add more detail to our safety programs throughout our expanded business unit. I was already coordinating with Rick Schmidt in Lakota and I've been active with the Devils Lake safety committee for the past four years.

Though I don't yet know all employees in Devils Lake and Lakota, I'm looking forward to making those connections. First, we intend to add more detail to our safety programs. Everything an employee needs to know in an emergency is outlined in a series of safety binders. Take a look inside any of our locations and you'll see those binders—all clearly identified by topics pertinent to work activities there.

What's in the binders?

For instance, a grain facility's binder library will cover important precautions such as lockout-tagout. We train employees to lock down power on a piece of equipment and tag it as a signal to others. Just like the owner's manual

for your tractor, the relevant binder reminds employees of stages in the lockout-tagout process.

One location might have as many as 24 binders, depending on the variety of services we offer there—grain, agronomy, energy. We introduce new employees to the binders, then throughout the year, we refresh their safety training.

We are constantly updating the binders as needed, such as changes regarding safety regulations or if there are changes at the facility. Currently, we're including new standards for anhydrous ammonia delivery and application. Those updates protect employees and patrons.

As a CHS anhydrous customer, you can look forward to a localized training program this winter. We want to help you, your employees and members of your family understand and use important safety precautions. We'll tailor your safety training to the location where you pick up your NH₃ tanks, so every step looks familiar.

Many patrons are not aware they are responsible for reporting any releases or spills on their property. However, they have the same guidelines we do. If you need assistance with any reporting, give us a call.

Jan. 2 will mark my 15-year anniversary with CHS. I am committed to ag safety, both professionally and personally as my husband, Donald, and our family farms.

If you'd like CHS to bring a safety message to a specific audience in your community, please contact me. We have done a number of outreach events at schools, fire departments, Farm Safety Days, etc.

THIS IS WHERE THE MAGIC HAPPENS.

With up to 60% of your yield dependent on soil fertility, invest wisely in your farm's productivity. Trust the leader in balanced crop nutrition. With over a decade of proven results, MicroEssentials® by The Mosaic Company, increases corn yields an average of 7.2 bu/ac compared to traditional fertilizer.

WHAT IS AFD AND WHAT CAN IT DO FOR YOU?

Was there a time this past fall when you wondered whether you'd have enough diesel to finish your day's work? We think about that, too. That's why automated fuel delivery (AFD) is coming.

By Steve Stabo
Location Manager
in Adams

What makes it automatic? An AFD monitor and a fuel sensor on your tank will use Wi-Fi to send an alert when your fuel falls below a predetermined level. That message will trigger a delivery truck—giving you peace of mind knowing your fuel will be there when you need it.

The second benefit is the ability to cash flow your Cenex® fuel purchases.

Because you're on AFD, you'll only be billed for the amount of fuel you actually use month to month. There's no charge to be enrolled in the program.

There's also an average monthly pricing option. It computes the 30-day average of fuel prices for the billing cycle in which you actually use the fuel. And, you have the ability to take ownership of the fuel in your tank any time you like the market price. Or you may choose to contract your fuel.

Our energy division in Adams will be your contact point for AFD signup. Once you enroll, we'll measure your tanks and record the precise GPS location for automatic monitoring. It's going to be easy! If you're interested in AFD or have questions, call me at our Adams location.

Diesel and gasoline aren't the only Cenex products we offer. Your energy division can be your resource for propane delivered by our regular truck or in larger tanker loads. The size of those Cenex trucks will help us cover the whole territory now included in your local CHS co-op system.

We sell or lease LP tanks in 250-, 500- and 1,000-gallon sizes. And for larger crop drying systems, we can couple tanks together. We also sell lubricants, tires and gasoline... and in fact, we're in the process of adding a cardrol location at our bulk plant near Adams on Highway 17.

Editor's note: Steve Stabo recently became location manager in Adams, having previously managed fertilizer operations there. He came to the former Farmers Union Oil in 2004, which was purchased by CHS in 2013.

AUTOMATED FUEL DELIVERY

- Monitors your tanks remotely
- Sends a tank-level alert via Wi-Fi
- Dispatches a tanker to your farm
- Only bills for the fuel you use

WEED CONTROL YOU CAN COUNT ON

Everest[®] 2.0
herbicide

Safe on wheat, relentless on weeds,
with **Flush after flush**[®] control.

Audit[®]
herbicide

Reliable broadleaf control
for the toughest weeds.

Supremacy[®]
herbicide

Quell the uprising with superior control
of over 70 hard-to-kill broadleaf weeds.

Rancona[®] V RTU
seed treatment

Three powerful fungicides for improved
seed emergence and higher yields.

FILLING BACKPACKS WITH MORE THAN HOMEWORK

CHS is very involved with local food pantries through Harvest for Hunger. “So I couldn’t say no when local organizers of Week END Hunger Project approached me to serve on that committee,” explains Safety Director Junell Jonasson. “I was surprised to learn 34% of children in area elementary schools qualify for free or reduced school meals. On the weekend, those children may not have access to food.”

As a result of this new fundraising effort, Week END

Hunger will supply pre-packed nutritious meals and snacks to students who are signed up for the program. The committee discreetly delivers food to lockers and backpacks, for use over the weekend. To cover the \$5 cost per student, the committee set a \$10,000 goal, which was met with an overwhelming response from businesses and charities across Cavalier County. Beyond our initial \$1,000 contribution, CHS customers and employees will continue to support this effort through our Harvest for Hunger campaign in the spring.

CHS donated \$1,000 to the Week END Hunger Project and added it to the list of organizations we'll support with our annual Harvest for Hunger campaign.
